EDUCATION

Northeastern University

M.S. in Computer Science | **GPA: 3.78/4.00**

Boston, MA

Sep 2024 - May 2027

- Coursework: Data Structures and Algorithms, Foundations of Artificial Intelligence, Web Development, Database Management

Northeastern University

B.S. in Business Administration, Marketing and Supply Chain Management | **GPA: 3.69/4.00**

Boston, MA

Sep 2018 - May 2022

PROFESSIONAL EXPERIENCE

Full Stack Engineering Co-op

July 2026 – Present

Hometap

Boston, MA

- Automated capture of 10+ document types per loan application by developing an **event-driven pipeline** that triggers document generation when a task is created for an applicant and ingested via **webhook callbacks** once they're signed.
- Designed an extensible document classification system that maps incoming document labels to internal document kinds via **Django migrations** to register and manage document kind definitions.
- Implemented **hash-key based authentication to establish a secure webhook connection** for the eSign integration, generating and registering the signing key and storing it in AWS Secrets Manager.
- Isolated e-signing tasks from a multi-task backend response by mapping tasks to their corresponding data based on task key, rendering them in a **React modal with SCSS** styling that routes users to their signing session via absolute URL.

Software Engineer Intern

Dec 2025 – Jan 2026

Alkaliza

Quito, Ecuador

- Developed an Information Management System in SAP Business One using **React.js, Node.js, HTML, CSS** and **SAP HANA** to help manage the sourcing and procurement process of the inventory of companies.
- Built a **React frontend with PrimeReact components** (DataTable, Calendar, Modal, FileUpload) to manage and render **1000+ importation records**, ensuring smooth handling of large datasets for the supply chain department.
- Implemented **robust state management and dynamic form validation in React** to capture and track **100+ attributes** (contracts, invoices, shipments, payments), solving consistency issues by syncing inputs directly with **backend APIs**.
- Integrated a **Node.js and Express.js backend with SAP HANA APIs**, designing **RESTful endpoints** for secure retrieval of enterprise data, using **Postman** to debug payload mismatches and validate end-to-end data flow.

PERSONAL PROJECTS

🔗 AI Financial Analysis Platform | TypeScript, Node.js, PostgreSQL, React, Gemini API

Dec 2025 – June 2026

- Constructed a three-tier transaction classification system using a merchant-matching dictionary, regex pattern rules, and Google Gemini as an AI fallback classifier, accurately categorizing transactions while **minimizing LLM API costs**.
- Built a **natural-language AI chat feature with Google Gemini** that converts financial questions into parameterized SQL queries executed via PostgreSQL, ensuring users can only ever access their own data.
- Designed an asynchronous PDF parsing pipeline in **Node.js using pdf-parse for text extraction**, with status polling and per-transaction error isolation so uploads process instantly and bad data is skipped rather than failing the whole import.

🔗 Repo Recommendation Engine | JavaScript, Express.js, React, MongoDB, GitHub API

Mar 2026 – Apr 2026

- Engineered an **open-source repository recommendation engine** using the **GitHub REST API**, querying and filtering repositories by language and beginner-friendly issue labels to surface matches based on a user's profile.
- Implemented a **user profile system with full CRUD operations**, storing developer preferences including tech stack, skill level, and areas of interest in **MongoDB Atlas** to personalize repository recommendations.
- Created a **personal contribution tracker** enabling users to save repositories and log contribution attempts with linked issues, PR references, and status updates.

🔗 Agricultural Operations System | Python, TypeScript, MySQL, React, FastAPI

Nov 2025 – Dec 2025

- Designed and created a **full-stack web application** to address operational inefficiencies in microgreen farm workflows by centralizing orders, inventory, and employee task data into a single system.
- Built **FastAPI REST endpoints with Pydantic data validation** to enforce schema correctness between frontend and backend, validating API behavior and query accuracy using **Postman**.
- Developed a responsive **React + Tailwind CSS** frontend supporting core business operations such as order creation, employee task assignment, and planting/harvest scheduling, improving usability for daily farm activities.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, C/C++, HTML, CSS

Frameworks & Libraries: React.js, Node.js, Express.js, Next.js, PrimeReact, Axios, Tailwind CSS, OAuth 2.0, Django

Databases & Tools: MySQL, MongoDB, PostgreSQL, Docker, SAP HANA, Git, Postman, Claude API, Gemini API, AWS

ACTIVITIES

- SHEROs, Society of Women Engineers, Northeastern Electric Racing, Latinas in Tech, Rewriting the Code
