EDUCATION

Northeastern University

Master of Science in Computer Science – GPA: 3.78/4.00

Boston, MA

Sep 2024 - May 2027

Coursework: Data Structures and Algorithms, Foundations of Artificial Intelligence, Web Development

Northeastern University

Bachelor's of Science in Business Administration – GPA: 3.69/4.00

Boston, MA

Sep 2018 – May 2022

WORK EXPERIENCE

Software Engineer Intern

Dec 2025 – Jan 2026

Alkaliza

Quito, Ecuador

- Developed an Information Management System in SAP Business One using **React.js**, **Node.js**, **HTML**, **CSS** and **SAP HANA** to help manage the sourcing and procurement process of the inventory of companies.
- Built a **React frontend with PrimeReact components** (DataTable, Calendar, Modal, FileUpload) to manage and render **1000+ importation records**, ensuring smooth handling of large datasets for the supply chain department.
- Implemented **robust state management and dynamic form validation in React** to capture and track **100+ attributes** (contracts, invoices, shipments, payments), solving consistency issues by syncing inputs directly with **backend APIs**.
- Integrated a **Node.js and Express.js backend with SAP HANA APIs**, designing **RESTful endpoints** for secure retrieval of enterprise data, using **Postman** to debug payload mismatches and validate end-to-end data flow.
- Configured **inline editing with input validation, calendar pickers, and file upload support** in editable tables, reducing error-prone manual data entry and streamlining the modifications of customs documents in the frontend.

PROJECTS

🔗 AI Financial Analysis Platform | TypeScript, Node.js, Express.js, React, PostgreSQL, Gemini API

- Constructed a three-tier transaction classification system using a merchant-matching dictionary, regex pattern rules, and **Google Gemini** as an AI fallback classifier, accurately categorizing transactions while **minimizing LLM API costs**.
- Built a **natural-language AI chat feature** with Google Gemini that converts financial questions into parameterized SQL queries executed via PostgreSQL, **ensuring users can only ever access their own data**.
- Designed an asynchronous PDF parsing pipeline in **Node.js using pdf-parse for text extraction**, with status polling and per-transaction error isolation so uploads process instantly and bad data is skipped rather than failing the whole import.
- Architected a **PostgreSQL schema** balancing global merchant data with per-user customizations, deployed via a Node.js/Express backend and React frontend on Render.

🔗 Repository Recommendation Engine | JavaScript, Node.js, Express.js, React, MongoDB, GitHub API

- Engineered an **open-source repository recommendation engine** using the **GitHub REST API**, querying and filtering repositories by language and beginner-friendly issue labels to surface matches based on a user's profile.
- Implemented a **user profile system** with full CRUD operations, storing developer preferences including tech stack, skill level, and areas of interest in **MongoDB Atlas** to personalize repository recommendations.
- Created a **personal contribution tracker** enabling users to save repositories and log contribution attempts with linked issues, PR references, and status updates.
- Established a **RESTful Express.js backend** with modular route and controller architecture, connecting a React frontend to MongoDB via Mongoose and deploying the full application on **Render with MongoDB Atlas**.

TECHNICAL SKILLS

Programming Languages:	Python, Java, JavaScript, TypeScript, C/C++ , HTML, CSS
Frameworks and Libraries:	React.js, Node.js, Express.js, Next.js, PrimeReact, Axios, Tailwind CSS, OAuth 2.0
Databases and Tools:	MySQL, MongoDB, PostgreSQL, SAP HANA, Git, GitHub, Postman, Claude API, Gemini API

ACTIVITIES

- SHEROs, Society of Women Engineers, Northeastern Electric Racing, Latinas in Tech, Rewriting the Code
