EDUCATION

Northeastern University

Boston, MA

Master of Science in Computer Science – GPA: 3.81/4.00

Sep 2024 - May 2027

Relevant Coursework: Data Structures and Algorithms, Object-Oriented Design, Discrete Structures, Database Management Systems, Foundations of Artificial Intelligence, Computer Systems, Web Development

Northeastern University

Boston, MA

Bachelor's of Science in Business Administration – GPA: 3.69/4.00

Sep 2018 – May 2022

TECHNICAL SKILLS

Programming Languages:	Python, Java, JavaScript, TypeScript, C/C++ , HTML, CSS
Frameworks and Libraries:	React.js, Node.js, Express.js, Next.js, PrimeReact, Axios, Tailwind CSS
Databases and Tools:	MySQL, MongoDB, PostgreSQL, SAP HANA, Git, GitHub, Prisma ORM, Docker, Postman

WORK EXPERIENCE

Software Engineer Intern

Dec 2025 – Jan 2026

Alkaliza

Quito, Ecuador

- Developed an Information Management System in SAP Business One using **React.js**, **Node.js**, **HTML**, **CSS** and **SAP HANA** to help manage the sourcing and procurement process of the inventory of companies.
- Built a **React frontend with PrimeReact components** (DataTable, Calendar, Modal, FileUpload) to manage and render **1000+ importation records**, ensuring smooth handling of large datasets for the supply chain department.
- Implemented **robust state management and dynamic form validation in React** to capture and track **100+ attributes** (contracts, invoices, shipments, payments), solving consistency issues by syncing inputs directly with **backend APIs**.
- Integrated a **Node.js and Express.js backend with SAP HANA APIs**, designing **RESTful endpoints** for secure retrieval of enterprise data, using **Postman** to debug payload mismatches and validate end-to-end data flow.
- Configured **inline editing with input validation, calendar pickers, and file upload support** in editable tables, reducing error-prone manual data entry and streamlining the modifications of customs documents in the frontend.

PROJECTS

🔗 GreenTrack: Microgreens Order Management System | Python, Typescript, React, MySQL, FastAPI

- Designed and created a **full-stack web application** to address operational inefficiencies in microgreen farm workflows by centralizing orders, inventory, and employee task data into a single system.
- Architected a normalized **MySQL relational database** to replace spreadsheet-based tracking, improving data consistency, scalability, and integrity across orders, crops, packaging, and employees.
- Implemented **SQL views** to simplify queries and reduce repeated data access across the application.
- Built **FastAPI REST endpoints** with **Pydantic data validation** to enforce schema correctness between frontend and backend, validating API behavior and query accuracy using **Postman**.
- Developed a responsive **React + Tailwind CSS** frontend supporting core business operations such as order creation, employee task assignment, and planting/harvest scheduling, improving usability for daily farm activities.

🔗 Spotify Listening Profile | Typescript, Node.js, Express.js, React, Spotify Web API, OAuth 2.0

- Developed a **web application to visualize a user's personal Spotify data**, including features like a listening summary, top artists and top tracks, as well as playlists and their content.
- Designed and implemented a backend authentication flow using **Spotify's OAuth Authorization Code** grant, handling login and callback routes to securely obtain user consent to their data.
- Integrated **Spotify Web API endpoints** to retrieve user profile data, top artists and tracks, and recently played history, transforming raw API responses into structured profile data.
- Managed Spotify **access and refresh tokens using HTTP-only cookies**, enabling secure session-based authentication while preventing client-side exposure of sensitive credentials.

ACTIVITIES

- SHEROs, Society of Women Engineers, Northeastern Electric Racing, Latinas in Tech, Rewriting the Code
